INTERNATIONAL GROUP

FLEET DECISION REPORT · AMBULANCES

Four WAS ambulances. The best two for HCIG.

Full comparison of four WAS 300 ambulances on quality, price, running risk and fit for the Red Sea. With a scored recommendation of the best two for value.

PREPARED FOR
The CEO · Healthcare International Group

DATE
14 October 2026

STATUS
Confidential · For decision

01 THE DECISION

Buy the Allrounder and the Hot-Country Sprinter.

Two vehicles, two jobs. One full emergency ambulance for critical patients and long transfers. One light, low cost ambulance for daily transfers between hotels, airport, clinics and hospital.

PICK 1 · SCORE 8.2 / 10 — Est. €150k to €190k

D RTW Allrounder · Sprinter 4.1 t

- Built to EN 1789. Full emergency ambulance (RTW).[4]
- Inorganic, sealed interior for extreme heat. Compressor fridge.[4]
- Air conditioning can also run on 230 V shore power while parked.[4]
- Stable mechanical stretcher table, Stem MEC 300 + Stollenwerk.[4]

PICK 2 · SCORE 8.0 / 10 — Est. €80k to €105k

B ALS/BLS Hot-Country · Sprinter 315

- Lowest price of the four. Designed for hot countries.[2]
- Heavy duty AC, solar roof fan, heat proof materials.[2,5]
- Full ALS/BLS kit listed: defibrillator, monitor, suction.[2]
- Now 3.88 t, and offered as 4×2 or 4×4.[5]

€230k to €295k
BOTH VEHICLES, EX WORKS, ESTIMATE

14% VAT + LEVIES. 0% CUSTOMS ON EU ORIGIN[17]

1,000 WAS 300
ALREADY RUN BY EGYPT'S AMBULANCE ORGANISATION[7]

Why these two

Quality	D is the strongest emergency ambulance for its price. B covers basic and advanced life support at the lowest cost.
Price	Together they cost about the same as one Dutch spec MAN ambulance (C, est. €200k to €250k).
Service in Egypt	Both run on Mercedes Sprinter. Mercedes-Benz Egypt has a workshop in Hurghada.[19] MAN's Egypt agent started in March 2026, for trucks and buses.[20]
Proven here	WAS delivered about 4,500 ambulance vehicles to Egypt's Health Ministry by 2021.[8] WAS has a sales partner in Cairo.[6]

Not recommended

A 4×4 Civil Protection	Score 6.1. Built for German disaster units: two patients, off road. Heavy at 5.38 t and costs more than B with less clinical kit. Only worth it for desert or beach rescue.
C MAN TGE	Score 5.8. Best stretcher system, but highest price, Dutch spec, and no proven van service network in Egypt.

Before ordering. The datasheets carry no prices. All prices here are estimates from public sources. Two points must be fixed in the WAS quotation: an engine and emission level that runs on Egyptian diesel, and the stretcher option for B. See page 13.

02 AT A GLANCE

Four WAS 300 ambulances, three base vehicles.

All four are WAS 300 panel van ambulances. Three sit on the Mercedes-Benz Sprinter, one on the MAN TGE. They differ in role, weight, stretcher system and price.

A KTW Type B Civil Protection 4×4

Patient transport ambulance for German civil protection units.[1]

Base	Sprinter 519 CDI, all wheel drive
Power · weight	190 PS · 5,380 kg
Patients	Up to 2 lying
Stretcher	Electro hydraulic table + 2nd stretcher
Est. price	€115k to €140k
Verdict	NICHE · DESERT ONLY

B ALS/BLS Hot-Country

Export ambulance for hard climates and target countries.[2]

Base	Sprinter 315 CDI, 4×2 (4×4 offered)
Power · weight	150 PS · 3,500 kg (now 3,880 kg)
Patients	1 lying
Stretcher	Ferno F2 roll in + loading ramp
Est. price	€80k to €105k
Verdict	PICK 2 · BEST VALUE

C RTW 4.25 t on MAN TGE

Dutch spec emergency ambulance with powered loading.[3]

Base	MAN TGE 3.180 L3H3, 4×2
Power · weight	180 PS (stated) · 4,250 kg
Patients	1 lying
Stretcher	Stryker Power-LOAD, powered
Est. price	€200k to €250k
Verdict	TOO COSTLY · WEAK SERVICE

D RTW Allrounder 4.1 t

Emergency ambulance for city and rural service, EN 1789.[4]

Base	Sprinter diesel, variants
Power · weight	To choose · 4,100 kg
Patients	1 lying
Stretcher	Stem MEC 300 table + Stollenwerk
Est. price	€150k to €190k
Verdict	PICK 1 · BEST OVERALL

03 SIDE BY SIDE

What each vehicle carries.

From the four WAS datasheets[1-4] and the WAS website.[5] "Not stated" means the datasheet is silent. Ask WAS.

	A KTW 4X4	B HOT-COUNTRY	C MAN TGE	D ALLROUNDER
Datasheet date	01.2024	05.2020	08.2024	04.2022
Role	Patient transport, Type B, civil protection	Emergency ALS/BLS, hot countries	Emergency ambulance (RTW)	Emergency ambulance (RTW), city and rural
Base vehicle	Sprinter 519 CDI AWD	Sprinter 315 CDI panel van	MAN TGE 3.180 L3H3	Sprinter diesel, variants
Drive	4×4 + rough road chassis	4×2 (website: 4×2 or 4×4)	4×2	Not stated
Engine	140 kW / 190 PS	110 kW / 150 PS	137 kW / 180 PS stated*	To choose
Gearbox	Automatic	Not stated	8 speed automatic	Automatic or manual
Gross weight	5,380 kg	3,500 kg (website 3,880 kg)	4,250 kg	4,100 kg
Wheelbase	3,665 mm	3,665 mm	3,640 mm	3,665 mm
EN 1789	Type B (KTW Typ B)	Not stated	Not stated	Built to EN 1789
Patients	2 lying, or 1 lying + 1 seated	1 lying	1 lying	1 lying
Stretcher system	WAS Hydropuls Comfort 2 electro hydraulic table, 2nd stretcher on wall	Ferno F2 roll in stretcher, folding ramp, reinforced platform	Stryker Power-LOAD powered loading	Stem MEC 300 mechanical table, Stollenwerk 3006/4002
Crew seats (rear)	1 folding swivel seat + partition seat	2 folding seats + doctor seat	1 sliding seat + partition seat	2 folding swivel seats + doctor seat with child belt and Isofix
Oxygen	2 × 11 l + 2 × 2 l, 3 outlets	2 × 10 l, 2 outlets	2 × 10 l, automatic switchover	Outlet, cylinders in external locker
Climate	Engine AC, 9 kW cooling	Heavy duty AC cab and rear, extra heat exchanger, solar roof fan	Heat exchanger, automatic climate, electric fan heater	Heavy duty AC possible, engine or 230 V shore power
Interior	Sealed joints, easy to disinfect	Heat proof materials, sealed, gapless furniture	Smooth surfaces, closed cabinets	Inorganic materials, sealed, gapless furniture
Electrics	CAN central electrics, DIN earthing, isolating transformer	Central panel, 3 × 230 V, 3 × 12 V	CAN bus, 230 V inverter, touch display, rear camera	Central panel, 230 V and 12 V
Storage	Large external locker, full height pharmacy cabinet	3 part wall cabinet, vacuum mattress cabinet	External locker, ceiling high cabinets for Lucas 3	Large external locker, compressor fridge, thermobox
Medical kit listed	Mounting points only	Defibrillator, monitor, suction, nebuliser, ventilator prep, splints	Not listed	Not listed
Special	Aluminium underbody guard, branch deflectors	270° rear doors	Dutch spec: C2000 radio, SOVAM livery	Child restraint, roof hatch

* 137 kW equals 186 PS, not 180 PS. Market listings show the TGE 3.180 at 130 kW / 177 PS. The file named "MAN-TGL" describes a MAN TGE van, not a MAN TGL truck. EN 1789 classes: A1 and A2 patient transport, B emergency ambulance, C mobile intensive care unit.[14]

04 WHAT IT COSTS

B costs less than half of C.

WAS does not publish prices. Each band below is built from public tenders, government orders and base vehicle price lists. Treat them as planning numbers until WAS quotes.

VEHICLE	ESTIMATE, EX WORKS	EVIDENCE BEHIND THE BAND
A KTW 4×4	€115k to €140k	Germany's federal civil protection agency buys this vehicle at about €137,000 each. 180 units, over €24M.[10,11] A similar state order: €174,000 per KTW Type B incl. radio.[12]
B Hot-Country	€80k to €105k	Egypt's Health Ministry ordered 1,000 WAS ambulances + 500 mobile clinics for €110M in 2021. That is €73k per vehicle on a bulk order.[8] Base Sprinter 316 CDI van listed at €39k to €43k net in 2020.[15] A single order costs more than bulk.
C MAN TGE	€200k to €250k	German emergency ambulances (RTW Type C) cost €260k to €300k in 2024 and 2025, incl. 19% VAT and medical kit.[13] That is about €220k to €250k net. Base TGE 3.180 van about €49.6k net.[16] Powered loading adds cost.
D Allrounder	€150k to €190k	Full emergency fit out like C, but a mechanical stretcher table and simpler electrics. Priced between A and C. This band carries the most uncertainty. Confirm with WAS.

What the two picks cost in Egypt

PAIR	EX WORKS	LANDED*
D + B (recommended)	€230k to €295k	€273k to €350k
D + D	€300k to €380k	€356k to €450k
B + B	€160k to €210k	€190k to €249k
C + D	€350k to €440k	€415k to €521k

* Landed adds about 18.5%: 14% VAT plus smaller levies. Customs duty on vehicles shipped from the EU has been zero since January 2019 under the EU Egypt Association Agreement.[17] An EUR.1 origin certificate is needed.

Not included: sea freight from Antwerp (WAS ships Egypt orders from there[7]), local medical devices if bought in Egypt, registration and the yearly ambulance licence.[24]

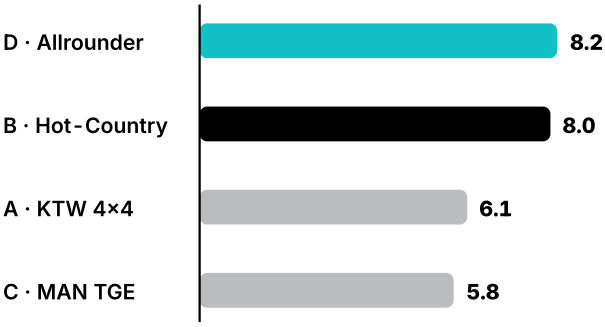

05 HOW WE SCORED

Seven criteria, weighted for HCIG.

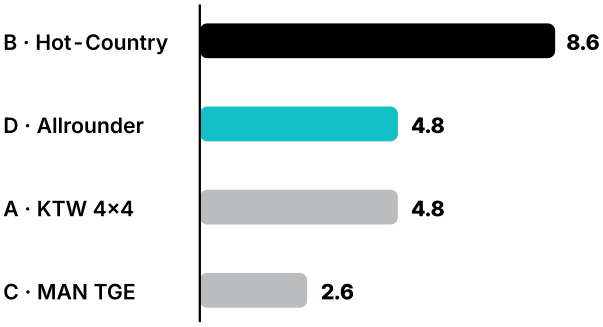

Each vehicle scored 1 to 10 per criterion. Weights reflect a private group serving tourists on the Red Sea: clinical quality first, then price, then what keeps the vehicle on the road in Egypt.

CRITERION	WEIGHT	A	B	C	D	MAIN REASON
Clinical capability	25%	5	6	9	9	C and D are full emergency ambulances. A is a transport vehicle.
Purchase price	20%	6	10	3	7	B is the lowest band. C the highest.
Heat and fuel fit	15%	6	9	5	8	B and D are built for hot countries. C is a Dutch spec vehicle.
Service and parts in Egypt	15%	7	10	3	9	Sprinter workshop in Hurghada. MAN van service unproven.
Running cost and reliability risk	10%	5	9	5	8	A is heavy with 4×4 electronics. B is light and simple.
Patient and crew handling	10%	7	4	10	8	Powered loading on C. Manual ramp on B.
Versatility and terrain	5%	9	6	5	7	A goes off road and takes 2 patients.
Weighted score	100%	**6.1**	**8.0**	**5.8**	**8.2**	

Weighted score, out of 10

Value index: score per €100k

Weighted score divided by the middle of each price band. B gives the most ambulance per euro. D and A tie, but D is a full emergency ambulance and A is not.

Does the result hold if weights change? D stays in the top two in every test. Clinical 35%, price 10%: D 8.4, B 7.6, C 6.4, A 6.0. Price 30%: B 8.5, D 8.0, A 6.1, C 5.2. Price and Egypt service ignored completely: D 8.3, C 7.4, B 6.8, A 5.9. C only passes B when cost and service do not count.

06 WHICH JOB, WHICH VEHICLE

The right vehicle for each job.

The use is not fixed yet. This page shows the best vehicle for each likely job, then the best overall pair.

JOB	A	B	C	D	BEST	WHY
Emergency calls from hotels and roads (ALS)	●●○○	●●●○	●●●●	●●●●	D	Full emergency ambulance. Same capability as C at a lower price and with local service.
Stable transfers: hotel, airport, clinic, hospital	●●○○	●●●●	●●○○	●●●○	B	Light, agile, lowest cost per trip. Enough kit for basic and advanced life support.
Long transfers on highways, e.g. to Cairo	●●●○	●●○○	●●●○	●●●●	D	Fridge for drugs, heat proof interior, crew comfort, 230 V AC option during stops.
Desert, safari camps, beach access	●●●●	●●○○	●○○○	●○○○	A	Only factory 4×4 with rough road chassis and underbody guard. B can be ordered 4×4 for less.[5]
Two patients at once, mass casualty	●●●●	●○○○	●○○○	●○○○	A	The only one with two stretcher positions.
Image with European guests	●●○○	●●○○	●●●●	●●●○	C	Powered loading is the most modern look. D is close, B uses a manual ramp.
Overall value	●●○○	●●●●	●○○○	●●●●	D B	Highest scores. Same chassis, so one service plan, one parts stock.

If HCIG needs a different pair

Standard case

Emergency plus transfers on paved roads.

D B

Recommended. Est. €230k to €295k.

Desert work is a must

Regular calls to camps, safaris, sand tracks.

D B 4×4

Order B with the 4×4 option before choosing A. A only if two patients off road is a real need.

Emergency only

Both vehicles respond to critical calls.

D D

Est. €300k to €380k. One spec, one training.

● = fit for the job, four dots best. Ratings use the datasheet equipment, the scoring on page 6 and the Egypt findings on page 9.

07 WHAT CREWS AND OWNERS SAY

What users praise and what they suffer.

From paramedic and owner forums. These are individual reports, not fleet statistics. Quotes are translated from German.

Stretcher systems: the biggest daily difference

Ferno (on B)

> "Much too wobbly and unstable."
> Paramedic, BOS-Fahrzeuge forum [25]

> "Very unergonomic operation."
> Paramedic, same thread [25]

Newer Ferno models are rated better. Ask WAS to price a Stollenwerk or table option for B.

Stollenwerk (on D)

> "The best compromise of price and performance."
> Paramedic, BOS-Fahrzeuge forum [25]

> "Reliable and relatively robust."
> Paramedic, Hamburg fire brigade [25]

Weak points: small front wheels, latch can be fussy.

Stryker (on C)

> "Makes a much more stable impression."
> Paramedic, BOS-Fahrzeuge forum [25]

> "Nice, but also quite overpriced."
> Paramedic, same thread [25]

Heavier to carry. Stryker reports fewer injuries with powered loading in a Danish review; this is a manufacturer claim. [30]

Base vehicles

PLATFORM	WHAT USERS PRAISE	WHAT USERS SUFFER
Mercedes Sprinter (B, D)	Powertrain called very reliable. One Australian owner driver reports 450,000 km with regular service and no trouble. [29]	The AdBlue (DEF) emissions system is the most common complaint. Sensor faults can start a no start countdown. [29] Extra ambulance electronics make faults harder to diagnose. [29]
Sprinter 4×4 (A)	Chosen by Germany's civil protection agency for 180 vehicles. [10,11]	Owner reports: "Low range" fault from lost communication with the transfer case, which also switched off cruise control (2024). [26] A failed 4×4 switch on a 2021 van, replaced under warranty. [27]
MAN TGE / VW Crafter (C)	On the EGR coolers, one owner adds: "Apart from that, they run." [28] The newer coolers are said to be better. [28]	EGR cooler leaking coolant on a 2018 Crafter after 50,000 km, part not in stock. [28] TGE owners report coolers leaking inside, and a second battery charging fault that stopped one van. [28]

WAS as a builder

- Well over 35,000 vehicles built. More than 450 staff in Emsbüren, 800 worldwide. [9]
- About 1,700 vehicles a year and €130M revenue in 2020. [8]
- Completed 1,000 WAS 300 ambulances for Egypt's Ambulance Organisation in February 2026. [7]
- No independent crew reviews of WAS build quality were found. Public praise comes from WAS itself.
- In 2021 the base vehicle supplier was 160 chassis behind on the Egypt order. [8] Delivery time depends on Mercedes chassis supply.

08 OPERATING ON THE RED SEA

Five facts that decide the fit.

A good ambulance in Germany can be a poor one in Hurghada. These five points weigh as much as the specification.

TOPIC	FINDING	EFFECT ON THE CHOICE
1 · Service network	Mercedes-Benz Egypt runs its own import, a central parts warehouse, and authorised workshops in Cairo, Giza, Alexandria and Hurghada.[19] MAN appointed a new Egypt agent on 1 March 2026, announced for trucks and buses.[20] Egypt's Health Ministry signed for 2,510 Mercedes based ambulances and mobile clinics in 2021.[18]	Strong for A, B, D. Weak for C until MAN confirms van service and parts near the Red Sea.
2 · WAS in Egypt	WAS has an Egypt sales partner in Nasr City, Cairo.[6] It delivered about 4,500 ambulance vehicles to the Health Ministry over 13 years[8] and 1,000 WAS 300 to the Ambulance Organisation.[7]	Parts and know how for the WAS 300 interior already exist in Egypt.
3 · Diesel quality	Euro 6 engines need diesel with 10 ppm sulfur or less.[22] Egyptian standards allow up to 10,000 ppm, and local diesel exceeds 5,000 ppm.[21] One refinery near Cairo makes Euro 5 grade diesel for Cairo.[22] AdBlue is made in Egypt (MOPCO, 20,000 t a year unit).[23]	The order must state an engine and emission level suited to Egyptian fuel. This applies to all four.
4 · Import cost	Zero customs duty on vehicles shipped from the EU since January 2019. About 18.5% remains: 14% VAT plus smaller levies.[17]	Same for all four. Ask a customs broker to confirm the ambulance tariff line.
5 · Licensing	Private ambulances need a technical conformity certificate from the Egyptian Ambulance Organisation and a yearly renewal. In 2020 fees were EGP 5,000 for an intensive care ambulance and EGP 3,000 for a standard one. Hospitals must train their crews.[24]	Check current rules before ordering. The WAS 300 family is known to the Ambulance Organisation.

The heat

A Good
Engine driven AC with 9 kW cooling. No hot country interior stated.

B Best
Built for very hot countries. Heat proof materials, constant airflow, solar roof fan.

C Weak
European climate pack. No hot country features stated.

D Strong
Inorganic interior, constant airflow. Heavy duty AC on engine or 230 V shore power.

Sources: WAS datasheets[1-4] and WAS product pages.[5]

09

EACH VEHICLE IN DETAIL · A AND B

A KTW Type B Civil Protection 4x4

Sprinter 519 CDI AWD · 190 PS · automatic · 5,380 kg · score 6.1 · est. €115k to €140k

Designed for German disaster units: patient transport after major incidents, where normal ambulances cannot pass. Germany's federal civil protection agency bought 180 of this type.[10,11]

Strengths

- Only 4×4 of the four, with rough road chassis and aluminium underbody guard.
- Two stretcher positions.
- Electro hydraulic stretcher table with height adjustment and side shift.
- Strong 9 kW air conditioning.

Weaknesses

- Transport ambulance. Medical kit only prepared, not fitted.
- Heaviest at 5.38 t: more fuel, heavier licence class in many countries.
- Civil protection details HCIG does not need.
- Owner reports of 4×4 electronic faults.[26,27]

Verdict. Buy only if desert or beach rescue with two patients is a real, regular need.

B ALS/BLS Hot-Country

Sprinter 315 CDI · 150 PS · 3,500 kg (now 3,880 kg) · score 8.0 · est. €80k to €105k

WAS's export ambulance for hard climates. The interior is "especially designed for very hot countries".[2] The datasheet lists a full emergency kit.

Strengths

- Lowest price and best value index (8.6).
- Heat proof materials, constant airflow, heavy duty AC, solar fan.
- Defibrillator, monitor, suction, nebuliser, vacuum splints listed.
- Light, so easy in towns and resort roads. 4×4 now offered.[5]

Weaknesses

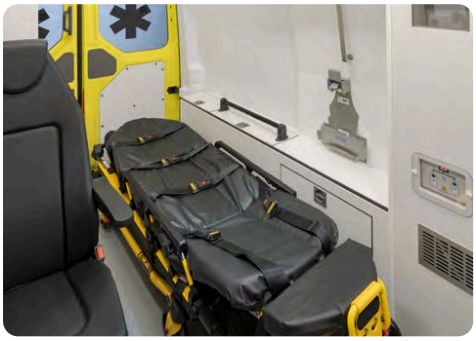

- Manual Ferno roll in stretcher on a ramp. Crews rate it unstable.[25]
- Datasheet from 2020. Some items may have changed.
- At 3.5 t the payload is tight. Order the 3.88 t version.
- Smallest engine of the four.

Verdict. Pick 2. Order at 3.88 t and ask WAS to price a better stretcher system.

09

EACH VEHICLE IN DETAIL · C AND D

C RTW 4.25 t on MAN TGE

MAN TGE 3.180 L3H3 · 8 speed automatic · 4,250 kg · score 5.8 · est. €200k to €250k

A Dutch specification emergency ambulance: C2000 radio, SOVAM livery, patient data on the MAN display.[3] The most modern cabin of the four.

Strengths

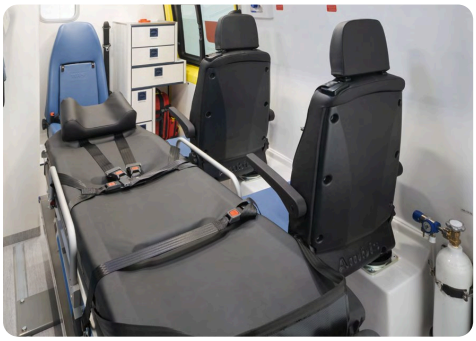

- Stryker Power-LOAD: the stretcher loads itself.
- Car like cockpit, leather comfort seats, second display.
- Automatic oxygen switchover, interior camera.
- Storage built for Lucas 3 chest compression device.

Weaknesses

- Highest price. Value index 2.6, the lowest.
- MAN Egypt agent only since March 2026, for trucks and buses.[20]
- Dutch radio and livery must be removed or changed.
- Engine data in the datasheet does not match (see page 4).

Verdict. Excellent in the Netherlands. Too expensive and too far from service for HCIG today.

D RTW Allrounder 4.1 t

Mercedes Sprinter diesel · automatic or manual · 4,100 kg · score 8.2 · est. €150k to €190k

An emergency ambulance for city and rural service, built to EN 1789.[4] WAS designed it for hard operating conditions and different climates.

Strengths

- Full emergency layout at a mid price.
- Inorganic, sealed interior. Compressor fridge and thermobox.
- AC can run on 230 V shore power while parked.
- Stem MEC 300 table and Stollenwerk stretcher, rated well by crews.[25]
- Doctor seat with child belt and Isofix: fit for families.

Weaknesses

- Engine and gearbox left open. Must be specified.
- Heavy duty AC listed as "possible": make it part of the order.
- Mechanical, not powered, stretcher loading.
- Widest price band. Needs a firm quote.

Verdict. Pick 1. The best balance of clinical quality, heat fit, service and price.

10 WHAT THE CEO WILL ASK

Ten questions, short answers.

1 Which two do we buy?

D, the Allrounder, as the emergency ambulance. B, the Hot-Country Sprinter, for transfers. Combined score 8.2 and 8.0, the top two.

2 What will they cost us in total?

About €230k to €295k ex works. About €273k to €350k landed in Egypt, before freight and licensing. Firm numbers need a WAS quote.

3 Why not two of the cheapest?

B has a manual ramp stretcher and a smaller layout. A critical tourist patient needs a full emergency ambulance. One D covers that. B covers the high volume of simple transfers.

4 Why not the MAN with the best stretcher?

It is the most expensive by far, built to Dutch rules, and MAN's van service in Egypt is not proven. A breakdown far from Cairo could stop it for days.

5 Do we need 4×4?

Only for desert, safari or beach calls. If yes, order B with the 4×4 option first. A is heavier and costs more for less clinical kit.

6 Can we service them in Hurghada?

Yes for the Sprinter models. Mercedes-Benz Egypt has an authorised workshop in Hurghada. WAS has a sales partner in Cairo. Confirm the Hurghada site takes Sprinter vans.

7 Will a European engine survive Egyptian diesel?

Not as a standard Euro 6 engine. The quote must state an engine and emission level made for Egyptian fuel. WAS has built 1,000 for Egypt and knows this market.

8 How long until delivery?

Not published. It depends on Mercedes chassis supply. WAS reported chassis delays in 2021. Ask for a delivery date and a late delivery penalty in the contract.

9 What licence do we need to run them?

A technical conformity certificate from the Egyptian Ambulance Organisation, renewed yearly, and trained crews. Check the current fee and rules before delivery.

10 What are they worth later?

Sprinter ambulances keep a resale market. Used WAS Sprinter ambulances from 2012 and 2013 still list at €10,900 to €13,800.[32]

11 HOW TO BUY SAFELY

Six risks, each with a control.

RISK	LEVEL	CONTROL
Engine damage from high sulfur diesel	HIGH	Write the engine and emission level for Egyptian fuel into the order. Get WAS and Mercedes to confirm warranty under Egyptian fuel.
Prices above the estimates	MEDIUM	Request itemised quotes for D and B, with options priced one by one. Compare with the WAS Egypt partner's local offer.
Late chassis delivery	MEDIUM	Fixed delivery date and penalty clause. Ask if WAS holds Sprinter chassis in stock.
Licensing delay on arrival	MEDIUM	Send the final specification to the Egyptian Ambulance Organisation for pre-check before ordering.
Import rules for medical devices	MEDIUM	Ask a customs broker whether to ship devices fitted or buy approved devices in Egypt.
Crew injury on B's manual ramp	LOW	Price a better stretcher system for B, and train crews on loading.

What to put in the request for quotation

D Allrounder 4.1 t

- Sprinter with automatic gearbox. Engine and emission level for Egyptian diesel.
- Heavy duty AC, engine driven and 230 V shore power, as standard in the order.
- Stem MEC 300 table, Stollenwerk stretcher, compressor fridge.
- Medical device list and price, fitted or not fitted.
- HCIG livery, English and Arabic labels.

B Hot-Country 3.88 t

- 3.88 t chassis. Price for 4×4 as an option.
- Engine and emission level for Egyptian diesel.
- Price for a stretcher table instead of the Ferno ramp.
- Current version of the 2020 datasheet.
- Same livery and labels as D.

Next steps

1. Approve the D + B direction.
2. Send the request for quotation to WAS and its Cairo partner.
3. Confirm the ambulance tariff line and VAT with a customs broker.
4. Confirm licence rules with the Egyptian Ambulance Organisation.
5. Confirm Sprinter van service at the Hurghada Mercedes workshop.
6. Ask for warranty, spare parts kit, crew training and delivery date.
7. Compare quotes against this report, then order.

12 EVIDENCE

Sources, method and data notes.

Method

Specifications come from the four WAS datasheets and the live WAS website. Prices, Egypt facts and user feedback come from public sources, each checked at the source. Research was cross checked by a second, independent AI research model. Claims that could not be confirmed were left out.

Scores are a judgement on the evidence, weighted for HCIG. Prices are estimates until WAS quotes.

Data notes

- The file "Datenblatt_WAS-300_RTW_MAN-TGL" describes a MAN TGE van.
- B: datasheet says 3,500 kg and 4×2. WAS website now says 3,880 kg, 4×2 or 4×4.
- C: 137 kW is 186 PS, not 180 PS. Listings show 130 kW / 177 PS.
- D: engine and gearbox are open in the datasheet.
- EUR ranges exclude Egyptian VAT unless stated.
